## Detailed Action

### *Allowable Subject Matter*

1. Claims 1-28 are allowed.
2. The following is an examiner's statement of reasons for allowance:

With respect to the independent claim 1, prior art fails to disclose or make obvious, in addition to the accompanying features of the claim, an ion beam implanter comprising: an implantation chamber defining an interior region wherein a workpiece is positioned to intersect the ion beam for ion implantation of an implantation surface of the workpiece by the ion beam; including a first rotation member rotatably coupled to the implantation chamber and a second rotation member rotatably coupled to the first rotation member having an axis of rotation offset from an axis of rotation of the first rotation member, and a third member fixedly attached to the second rotation member, the second rotation member and the rotatable drive of the third rotation member rotating to move the workpiece along a path of travel for implantation of the implantation surface so that a distance that the ion beam moves through the implantation chamber before striking the implantation surface of the workpiece is constant.

With respect to the independent claim 15, prior art fails to disclose or make obvious, in addition to the accompanying features of the claim, an ion beam implanter comprising: a first and a second rotation member rotatably coupled to the implantation chamber where the second rotation member is rotatably coupled to the first rotation member; and wherein a drive mechanism is fixedly coupled to the second rotation member such that the first and second rotation members and the rotatable drive of the drive mechanism allow the workpiece implantation surface to be implanted at a desired implantation angle and the workpiece moves

along a path of travel coincident with the desired implantation angle such that a focal length of the ion beam is constant.

The dependent claims 2-14 and 26-27, and 16-25 and 28 are allowable by virtue of their dependence upon the independent claims 1 and 15, respectively.

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. J. Ferrara (6,710,360 B2) discloses an ion beam implanter, wherein a workpiece is positioned to intersect the ion beam, and wherein the workpiece support structure includes a rotation member rotatably affixed to the implantation chamber.
4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
5. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
